

[NCT05262023] Data Management Plan

Overview

This Data Management Plan (DMP) outlines the processes for collecting, handling, cleaning, and storing data for study NCT05262023 evaluating DNL593 in participants with FTD-GRN.

Objectives

- Ensure high-quality, reliable, and compliant data.
- Define the roles and responsibilities of the data management team, site staff, and vendors.
- Establish timelines for data collection, validation, and database lock.

Data Sources

Data will be collected from:

- Electronic Data Capture (EDC) system: case report forms (CRFs) completed by site staff.
- ePRO system: participant-reported outcomes collected via Acme ePRO.
- Central laboratory: laboratory values, biomarkers, and PK/PD results.
- Imaging vendor: MRI and imaging data uploaded via secure portal.
- Safety reporting system: adverse event and serious adverse event reports.

Data Flow

All source data will be entered into the EDC. ePRO, lab, and imaging data will be transferred via secure file transfer to the data management team for integration into the clinical database. The following steps summarize the data flow:

- Sites enter CRF data into the EDC within 5 days of visit completion.
- Acme ePRO exports participant diary data nightly to the data warehouse.
- Central lab uploads results weekly; data management performs reconciliation against sample logs.
- Imaging vendor provides de-identified imaging data within 7 days of scan.

Data Validation & Cleaning

Data management will perform ongoing data validation checks including:

- Range checks and logical consistency.
- Missing or out-of-window visits.
- Cross-database checks between EDC, ePRO, and lab data.
- Query management: queries will be issued to sites via the EDC, with a target resolution time of 10 business days.

Statistical Analysis Plan

The statistical analysis plan (SAP) will outline analysis populations, endpoints, and statistical methods. Data management will ensure the database is ready for analysis and all queries are resolved prior to database lock.

Security & Confidentiality

- Data transmissions will use encrypted channels (SFTP/HTTPS).
- Access to the EDC and data warehouse is role-based and requires multi-factor authentication.
- Identifiable participant information will be coded with unique subject IDs.

Roles & Responsibilities

- **Data Manager (Jane Doe, PhD)** – oversees data management processes, defines edit checks, and coordinates with vendors.
- **Database Programmer (John Smith)** – builds and maintains the EDC, implements edit checks, and manages exports.
- **Clinical Data Associate** – performs data review, issues queries, and tracks resolutions.
- **Site Coordinator** – enters CRF data and responds to queries.
- **Vendor Liaisons** – manage data transfers from the ePRO, lab, and imaging vendors.

Timeline & Deliverables

Key milestones are summarized below:

Milestone	Target Date	Responsible Party
Database design complete	Jan 15 2025	Data Manager
First patient in (FPI)	Feb 1 2025	Sites

Interim data review	Jul 1 2025	Data Manager
Database lock	Dec 15 2025	Data Manager
Final CSR data transfer	Jan 31 2026	Data Manager

Appendices

Include data management forms, edit check specifications, and vendor data transfer agreements.
